## AMENDMENTS TO THE SPECIFICATION

1.    Please replace the paragraph identified on page 7, lines 11-16, with the following paragraph:

After identifying the appropriate base data structure, the server 102 modifies the data structure to reference the requested content item by inserting the requested URL into the playlist's sequence of URLs.    In most cases, this modification will be performed on a copy of the base data structure.    A copy of the base data structure is a duplicate playlist.    After the base playlist has been modified in this manner, server 102 provides the content items referenced by the modified data structure or playlist to the client 104.

2.    Please replace the paragraph beginning on page 8, lines 24-25, and continuing to page 9, lines 1-2, with the following paragraph:

Fig. 4 is a block diagram that shows an exemplary copy 212 of a base data structure 206 or playlist.    A copy of a base data structure 206 or playlist is a duplicate data structure or playlist.    The copy copy/duplicate is modified to reference client requested content item(s).    Because playlist 212 is a copy of playlist 206, playlist 212 includes streaming media content references 208 and placeholder 210
